### CHEMICAL PEELS

Glycolic peels remove the upper layer of dead skin cells, softening fine lines, promoting a rosy facial glow, and allowing better penetration of other skin care products.

### BOTOX

BOTOX® Cosmetic is a nonsurgical, physician-administered, and FDA approved treatment that can temporarily smooth moderate to severe frown lines between the brows in people from 18 to 65 years of age. A 10-minute treatment generally lasts three to six months (individual results vary).

### RESTITLANE

Restylane® is a nonsurgical, physician-administered, and FDA approved cosmetic dermal filler for correcting facial wrinkles and folds. Restylane uses hyaluronic acid, a natural substance that already exists in the human body. A treatment generally lasts six to 12 months (individual results vary).

### SCLEROTHERAPY

Spider veins – small but unsightly clusters of red, blue or purple veins that typically appear on thighs, calves, and ankles – can be treated with sclerotherapy. In this nonsurgical, physician-administered procedure, veins are injected with a sclerosing solution, which causes them to collapse and fade from view.

### COSMETIC LASER TREATMENTS

Our physicians use the Candela GentleLASE® long-pulse and the V-beam pulse dye lasers to treat a wide range of cosmetic conditions including these and others:

- Facial or body hair
- Facial or leg veins
- Age spots
- Freckles, birth marks
- Periorbital wrinkles
- Scars, stretch marks
- Angiomas
- Port-wine stains
- Melasma
- Venous lakes
- Rosacea
- Warts
